Flexural Behavior of Concrete Beams Reinforced with Glass

In addition, an equation based on flexural stiffness of GFRP reinforced concrete was developed to predict deflections. Based on this investigation and those conducted by others, a theoretical correlation for predicting crack width was proposed. Six concrete beams reinforced with different GFRP reinforcement ratios were tested. Their measured deflections and crack widths were compared with the proposed models. The experimental results compared favorably with those predicted by the models.

Shear behavior of concrete beams reinforced exclusively

To understand the shear behavior of FRP reinforced beams without transverse reinforcement, deeper analysis of the crack development during the process of shear failure is important. Moreover, to obtain better interpretation of the test results and to explain the complex shear failure mechanisms digital measurements based on photogrammetry tools should be involved to enable detailed investigation of the shear failure process.
